

DuraSpin Drywall User Profile

// You would think that the cost of the screws would be expensive but they are very comparable to buying them individually in 6,000 lot boxes, especially when you consider that I'm hanging drywall about 4 times faster! //

Install Drywall 31% Faster A Day in the Life of a Drywall Contractor

Business: Rocchetta Drywall And Renovation
Sault Ste. Marie, Ontario, Canada

Owner: Frank Rocchetta

Expertise: Commercial and Residential Drywall, 14 years

Frank Rocchetta has been using corded screw guns and bulk screws for 14 years. He's hung well over a million square feet of drywall. He knows what it's like to pick steel slivers out of his fingertips at the end of the day. He remembers how his hands were always sore and cramped. But this Ontario drywall contractor will also tell you that the day he switched to Senco's DuraSpin DS162-14v was the day he kissed all those pains goodbye.

"The collated screws that feed through the gun are an incredible idea," says Rocchetta. "No more digging steel slivers out of my fingers after retrieving screws from my tool pouch one at a time to reload the gun."

With the ability to drive more than 1,000 screws per charge and 50 screws before reloading, the rechargeable, cordless DuraSpin keeps workers moving. In independent trials conducted by R.S. Means Consulting, using the DuraSpin increased overall productivity by an average of 31 percent by enabling workers to hang drywall between four to eight times faster when compared to corded screw guns and loose screws.

"The 14.4 volt batteries last for an exceptionally long time, even after continuous use," commented Rocchetta. "As long as you keep your second battery in the quick charger, this tool will never let you down."

Duraspin is lightweight and designed to be used one-handed, which frees up your other hand to hold work materials (great for ceiling work). And it's equally comfortable in either hand, reducing fatigue.

Thanks to DuraSpin's easy-to-use countersink adjustment and cordless design, Rocchetta and his team can move easily and quickly from job to job without switching tools. And they don't have to worry about slowdowns due to tangled cords, tripping or inadvertent unplugging.

"It is by far the fastest, most comfortable gun that I have ever used," says Rocchetta.
